

Information About Desktop Network Systems Ltd

The e-business, e-commerce, the Internet, the net, the web, B2B, B2C, dot comms - these are the buzzwords of the day. Politicians, the Media, and business are all talking about the 'e-revolution' and urging all companies to get online. However, to support Internet services or to supply the back office computing requires a reliable, secure and scalable systems and the technical expertise to support them.

DNS provides these services.

We are a technology company with a thorough grounding in many operating systems. We bring the experience and knowledge of supporting systems in major companies to all levels of business. The principal partners have worked in IT for over ten years and have a solid

background in delivering IT solutions for organizations ranging from the public sector to large corporate.

Our work has included all stages of solution development from initial requirements gathering and specification, through to implementation and support. We have a wealth of knowledge relating to the deployment and management of business systems,

which include numerous ways to reduce the system support costs.

We can help you with the design of your computer system, installation, training of your staff. Weather it's at home, the office or a data centre
